

- There have been a handful of non-compatible API changes. For details, see [Appendix B, \*Upgrading from 2.0 to 2.1\*](#), page 62.

2.0.6: May 3, 2009

- Do not attempt to uncompress streams that have decode parameters we don't recognize. Earlier versions of qpdf would have rejected files with such streams.

2.0.5: March 10, 2009

- Improve error handling in the LZW decoder, and fix a small error introduced in the previous version with regard to handling full tables. The LZW decoder has been more strongly verified in this release.

2.0.4: February 21, 2009

- Include proper support for LZW streams encoded without the “early code change” flag. Special thanks to Atom Smasher who reported the problem and provided an input file compressed in this way, which I did not previously have.
- Implement some improvements to file recovery logic.

2.0.3: February 15, 2009

- Compile cleanly with gcc 4.4.
- Handle strings encoded as UTF-16BE properly.

2.0.2: June 30, 2008

- Update test suite to work properly with a non-**bash** */bin/sh* and with Perl 5.10. No changes were made to the actual qpdf source code itself for this release.

2.0.1: May 6, 2008

- No changes in functionality or interface. This release includes fixes to the source code so that qpdf compiles properly and passes its test suite on a broader range of platforms. See *ChangeLog* in the source distribution for details.

2.0: April 29, 2008

- First public release.
