
Table of Contents

General Information	v
1. What is QPDF?	1
2. Building and Installing QPDF	2
2.1. System Requirements	2
2.2. Build Instructions	2
2.3. Notes for Packagers	3
3. Running QPDF	4
3.1. Basic Invocation	4
3.2. Shell Completion	4
3.3. Basic Options	4
3.4. Encryption Options	8
3.5. Page Selection Options	10
3.6. Overlay and Underlay Options	12
3.7. Advanced Parsing Options	12
3.8. Advanced Transformation Options	13
3.9. Testing, Inspection, and Debugging Options	18
3.10. Unicode Passwords	20
4. QDF Mode	22
5. Using the QPDF Library	24
5.1. Using QPDF from C++	24
5.2. Using QPDF from other languages	24
6. QPDF JSON	25
6.1. Overview	25
6.2. JSON Guarantees	25
6.3. Limitations of JSON Representation	26
6.4. JSON: Special Considerations	26
7. Design and Library Notes	28
7.1. Introduction	28
7.2. Design Goals	28
7.3. Helper Classes	29
7.4. Implementation Notes	30
7.5. Casting Policy	31
7.6. Encryption	33
7.7. Random Number Generation	33
7.8. Adding and Removing Pages	33
7.9. Reserving Object Numbers	34
7.10. Copying Objects From Other PDF Files	34
7.11. Writing PDF Files	34
7.12. Filtered Streams	35
8. Linearization	37
8.1. Basic Strategy for Linearization	37
8.2. Preparing For Linearization	37
8.3. Optimization	37
8.4. Writing Linearized Files	38
8.5. Calculating Linearization Data	38
8.6. Known Issues with Linearization	38
8.7. Debugging Note	39
9. Object and Cross-Reference Streams	40
9.1. Object Streams	40
9.2. Cross-Reference Streams	40
9.2.1. Cross-Reference Stream Data	41
